finishes & product care

powder coated

items wash as required with warm soapy water using a soft clean cloth. for marine or commercial environments, we recommend regular cleaning. do not pressure wash or steam items that are powder coated. if powder coating chips due to a knock and / or rough treatment this is not covered by warranty. touch up paint can be purchased on request (depending on availability). scratches and chips should be repaired as soon as they appear.

glass, perspex, resin and ceramic

these hard flat surface materials should be cleaned and or dusted with a soft cloth. for more stubborn marks, use a non-abrasive mild soap and damp cloth. never use wool metallic scourers as these will scratch the surface. chipping and scratching are considered wear and tear of the product are not warranted.
